

Little Texas Bar

Case Study

Located in Belleville, Ontario, the Little Texas Nightclub boasts of being the #1 Entertainment Center in town. Whether it's to watch sporting events, play pool, or to party and dance the night away, its patrons love it for its spaciousness and fun atmosphere.

When their existing fire alarm panel system died and was subject to a 45-day wait to replace, the management team at Little Texas needed to explore alternatives. With cost-effective and innovative products readily available for installation, the team at Oosterhof Electric was able to position Maple Armor as the ideal solution for them.

Their new system now includes Maple Armor's FW106S single-loop panel, the FW511 smoke detectors, the FW962 horn/strobes and the FW811M mini-module which fit in a single-gang box and allowed for the existing conventional heat detectors and manual pull stations to remain on the system and saving the client money.

The process of removing the old panel and installing the new system took our partners 6 hours to complete.

We're happy to hear how much the clients love the clean look of their new panel.

About Maple Armor

Founded in Montreal, QC in 2011, Maple Armor designs and manufactures addressable fire alarm systems. We're excited to provide high quality and cost effective options, with the reliability of Canadian engineering. We work closely with our clients to develop our products because we know how important it is to meet their individual needs. We're very proud that the work we do protects lives every day, and that passion for our industry is what drives us to maintain the highest level of quality and reliability.
